Professional Experience

Sep 2022 – Present   Company: **Nissan Digital**, Trivandrum
                                                            Position: **Data Engineer**

Outline

Building a data mart that centralizes all information related to the latest vehicle series, including body part specifications, shipment details, and vendor information. This comprehensive data repository will enable us to trace the origin of any part-related issues and pinpoint the affected vehicles for targeted recalls.

Key Responsibilities

- Ensure adherence to data quality standards and ensure delivery with highest possible quality without compromising on the timelines.
- Develop automated scripts using Python to create table in snowflakes.
- Build scalable, maintainable and testable code.
- Participating in peer code reviews and managing criteria applied during code reviews.
- Coaching and mentoring other members of the team.

Sep 2021 – Sep 2022   Company: **Cognizant Pvt.**, Gurgaon
                                                            Position: **Talend Developer**

Outline

Conversion of the legacy (Mainframe based) Insurance application to a cloud-based Insurance suit, Guide Wire. The data from the legacy system is extracted and migrated to Guidewire system. Here all the insurance coverages transformations are applied before loading the data into Guidewire Policy center.

Key Responsibilities

- Developing Talend Jobs using various components related to Talend file components, processing components, system components, XML components, technical components, misc. group components, database/data warehouse components, custom code components.
- Implementation of Error Handling in jobs.
- Implementation of SCD components.
- Creating design and test case documents.
- Performing Unit and Integration testing.
- Interacting with business owner for requirement analysis for different modules to define business and functional specifications.

Jan 2019 – Sep 2021   Company: **Tata Consultancy Services**, Noida
                                                            Position: **ETL Developer**

Outline

Working as a full-time developer for a retail drugstore chain that sells prescription and on-prescription drugs and general merchandise. Retail renewal program is a program which focuses on the retail transformation with SAP at WBA.

Key Responsibilities

- Designing ETL framework for various applications related to Pricing, promotion, Zones and Deals.
- Developing custom code using JAVA for specific client requirements.
- Performing Unit and Integration testing.
- Migrated Walgreens existing ETL batches (Developed on other ETL tools like Informatica, Ab Initio) into the Talend.
- Experience using email activities to send email reports and errors.
- Developed dynamic frameworks for extraction and loading of multiple tables.
